

SEPTIC TANK

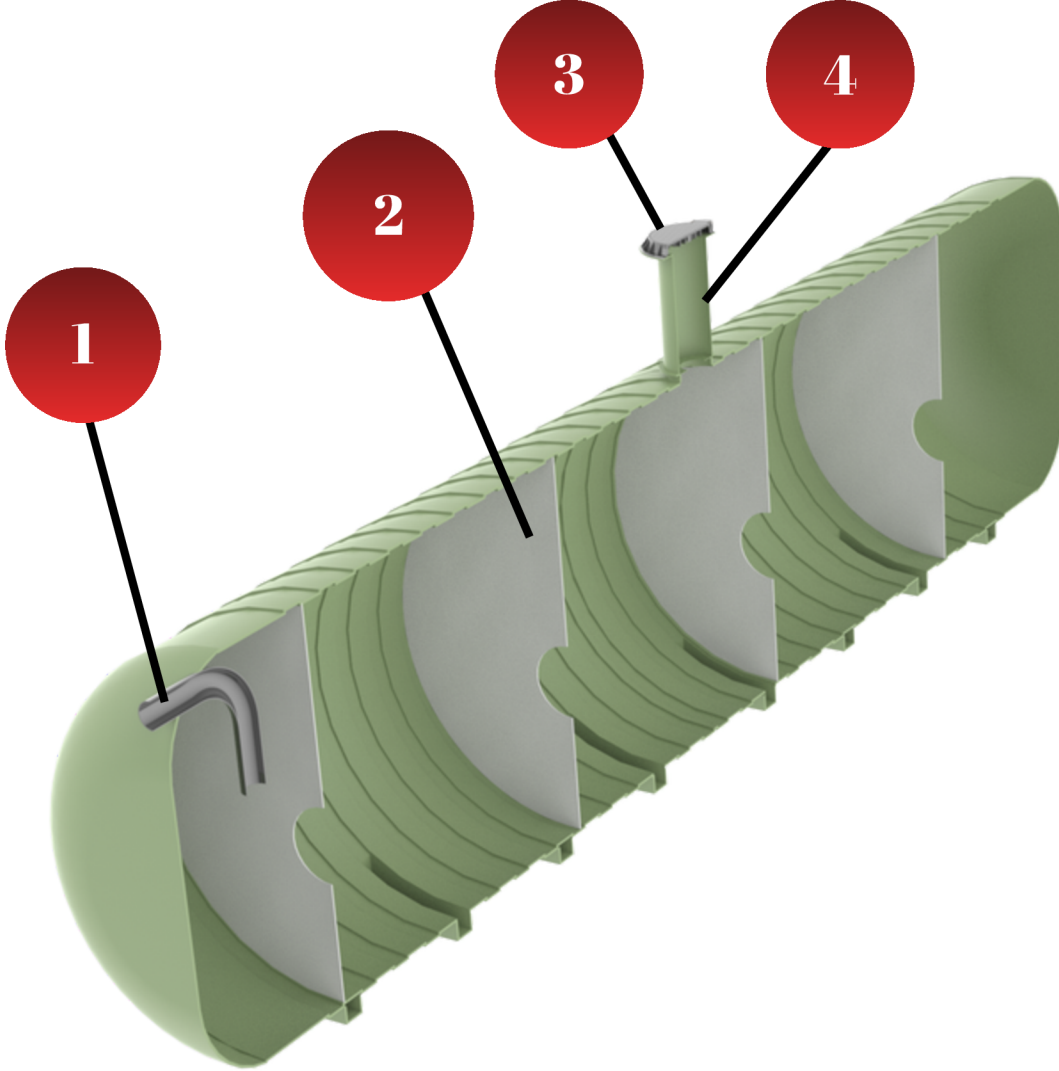

Engineered for demanding below-ground use, Metusan GRP tanks (1,000–110,000 L) deliver strength, durability, and long-term reliability. Ideal for stormwater, waste water, fire-fighting, potable water, and rainwater storage, they also excel in specialised applications such as spill containment and transformer oil storage.

Constructed from glass reinforced plastic (GRP), these tanks combine corrosion resistance, lightweight handling, and a high strength-to-weight ratio, making them easier to transport and install than steel or concrete alternatives. GRP is inert to most chemicals and does not rust, ensuring water quality remains uncompromised. With proper maintenance, a GRP tank offers a lifespan of up to 50 years without the need for repainting or recoating.

Each tank is manufactured under strict quality control to ensure resistance to ground movement, excellent chemical performance, and dependable service life in even the toughest environments.
